

Variable stress patterns in English: Inter-individual differences and the nature of the morphology-phonology interface

[Prof. Dr. Sabine Arndt-Lappe](#) and [Tammy Ganster, M.A.](#)

Timeline: since 2019

The project systematically investigates inter-individual variation in stress position both in language production and perception. On a theoretical level, we will use our findings to develop a more adequate model of morpho-phonological competence, which crucially takes into account the role of previous linguistic experience.

Further information about the project can be found [here](#)

Presentations

Ganster, Tammy. 2021. „The role of individual linguistic experience in the stressing of complex words”, 28th Manchester Phonology Meeting, University of Edinburgh and University of Manchester, England, forthcoming 26-28.03.2021.

Arndt-Lappe, Sabine. 2021. Different Lexicons Make Different Rivals. Invited paper presented at the workshop *Affix Rivalry*. Université de Fribourg, 19.3.2021.

Arndt-Lappe, Sabine, Fabian Tomaschek & Robin Schrecklinger. 2020. Stratification effects without morphological strata, syllable counting effects without actual counts, and what's in a trigram? Paper presented at the 19th International Morphology Meeting (Workshop Implications of Psychocomputational Modelling for Morphological Theory, organised by Marcello Ferro, Claudia Marzi and Vito Pirrelli). Vienna, 6.-8.2.2020.

Ganster, Tammy. 2020. "The role of individual linguistic experience in the stressing of complex words", 16. Tagung zur Phonetik und Phonologie im deutschsprachigen Raum, Trier University, Trier, 10.09.2020.

Arndt-Lappe, Sabine, Fabian Tomaschek & Robin Schrecklinger. 2019. Modelling English stress assignment from orthography with Naive Discriminative Learning: Morphological and Structural Effects. Paper presented at the International Morphological Processing Conference (MoProc), Tübingen, 4.-7.11.2019.
